

ENVIRONMENTAL MANAGEMENT STATEMENT

Environmental Management Statement

As a global clean energy enterprise, Sungrow Power Supply Co., Ltd. (short for "Sungrow" or the "Company") upholds the environmental policy of "green energy saving, pollution prevention, clean and efficient", and is committed to providing the world's first-class clean energy full life cycle solutions. The company focuses on reducing dependence on traditional fossil energy sources, actively participates in reducing greenhouse gas emissions, and aims to promote the green transformation of the global energy structure and the sustainable development of partners. In order to regulate the company's environmental management requirements and measures, this statement is formulated.

This statement applies to Sungrow and its subsidiaries and applies to the Company's operational activities related to production and business operations, products and services, distribution and logistics, waste management, due diligence and mergers and acquisitions, and requires suppliers, service providers, contractors and other major business partners to actively comply with this statement or equivalent policy requirements.

Perfecting the Environmental Management System

- The Strategy and Sustainable Development Committee of the Board of Directors(Board-level committee), as the highest management body, is responsible for decision-making and supervision of environmental management-related matters, and tracking and evaluating performance indicators related to environmental management. The chairman and senior executives of the company led the formation of the safety production committee, and the comprehensive safety and environment management Department as the executive agency, comprehensively implemented and coordinated the company's environmental management related work, and integrated environmental management into the company's various businesses.
- Strictly abide by applicable laws and regulations on environmental management, including but not limited to the Environmental Protection Law of the People's Republic of China, the Law of the People's Republic of China on the Prevention and Control of Air Pollution, the Law of the People's Republic of China on the Prevention and Control of Environmental Pollution by Solid Waste, the Law of the People's Republic of China on the Prevention and Control of Water Pollution, the Law of the People's Republic of China on the Environmental Impact Assessment, etc. And other laws , regulations , implementation rules and regulations where the company operates to fully implement environmental compliance requirements.
- Committed to fully integrate environmental policies into corporate governance and development strategies, formulate policies such as Environmental Policy, Pollutant Environmental Protection Regulations, Economizing Management Measures, and Regulations on the Management of Worthless and Inert Materials, and incorporate environmental management into the company's sustainable development management as a key issue.
- Committed to promote the coverage and improvement of environmental management system(EMS), EMS covers all relevant operations , and get the ISO 14001:2015 EMS certification.

- Carry out external and internal environmental management system audits regularly, external independent audits covering all relevant operations of the company at least once every three years, and notify and order to complete the rectification closed-loop for the problems arising in the audits, and incorporate them into the scope of key supervision in the later stage, so as to achieve continuous improvement of environmental performance.

Strengthen Environmental Management Measures

- Commitment to reduce environmental footprint (including soil, air and water pollution) through effective prevention and mitigation measures, and strive for the sustainable use of resources by reducing energy consumption, improving water utilization and reducing waste emissions, including but not limited to:
 - Continuously improve the manufacturing process, promote the use of energy-saving equipment, and improve energy efficiency;
 - Systematic management of water intake, use and discharge to improve the efficiency of water use;
 - Manage waste systematically, conduct responsible disposal and recycling, improve the level of waste resource utilization, reduce the generation of hazardous waste, and ensure that all hazardous substances are disposed of in compliance;

- Reduce the emission of pollutants in the process of product manufacturing and business activities, and reduce the impact of wastewater, waste gas and solid waste emissions.
- Conduct regular education and training on environmental protection for employees to avoid and reduce the occurrence of environmental related accidents.
- Encourage suppliers, subcontractors and customers to adopt international environmental standards and fulfill environmental responsibilities.
- Protect biodiversity, not destroy forests, protect land from pollution.
- Regularly identify, assess and manage environmental performance, set specific and measurable environmental impact reduction indicators and targets, and continuously monitor and evaluate progress to ensure the effectiveness of environmental management.

Provide Green and Low-carbon Products

- 
- Carry out product life cycle assessments, commitment to progressively provide transparent digital information of product environmental impact, such as Environmental Product Declaration or other types of ecolabels.
 - Commit to incorporate life cycle assessment into the design of new products and solutions, and gradually introduce environmentally friendly materials with low pollution to replace some raw materials and packaging materials without affecting product performance, so as to reduce product carbon emissions and energy consumption in end treatment.
 - Commit to gradually establish product recycling programs, such as battery products and components that can be dismantled, remanufactured, reused or recycled, and disclose the percentage of products that are recycled, the revenue generated and/or the cost savings, to create a resource-saving circular economy and business model.

Actively Deal With Climate Change

- Continuously improve the accuracy of carbon inventory data, strictly and objectively disclose carbon emission information, and commit to calculate and publish greenhouse gas emissions in scope 1, 2 and 3 every year.
- Set carbon reduction/carbon neutrality targets to reduce greenhouse gas emissions by improving production processes, saving energy, reducing emissions, using clean energy, or other measures.
- Actively participate in climate-related initiative organizations, continue to improve climate governance capabilities, and contribute to the strength of enterprises.

Fulfill Our Responsibility for Nature Conservation

- Recognising the importance of biodiversity for sustainable development and making a company-level commitment to biodiversity conservation, the Strategy and Sustainable Development Committee, as the highest governing body, has decision-making and oversight responsibility for biodiversity conservation commitments and actions.
- Periodically identify and assess biodiversity risks in the company's value chain to prioritize biodiversity conservation actions, and ensure that biodiversity policies cover the value chain of its own business, suppliers, partners, etc.
