* Full power MPP range is temperature dependent, check the characteristic curve of the inverter for more information

** For sustained operation above 40°C, an optional 60 °C temperature rise transformer is recommended

***The ambient temperature is determined as the average temperature obtained from at least four evenly distributed temperature monitoring points located at a distance of at least 1 meter from the equipment, at a height halfway up the machine. The temperature sensors must be shielded from airflow, thermal radiation, and rapid temperature fluctuations to prevent display inaccuracies.
